Enhancement in the VBP Tab Functionality

With this enhancement, the functionality of an eChart setting '*VBP Tab Supervisory Signature mandatory for OASIS Locking*' is changed for OASIS Locking.

This setting can be accessed using the path:

Setup → Clinical → eChart Validation → eChart Submission/Approval Validations → OASIS Assessment Submission Validations → Value Based Purchase(VBP) → VBP Tab Supervisory Signature mandatory for OASIS Locking.

Previously, when this setting was enabled, the system randomly showed any one assessment under the 'Previous Assessment for Comparison' section in the VBP tab and If a Supervisory signature was available for that assessment, locking was allowed for the discharge assessments.

With this update, when this setting is enabled, based on the time points for which it is enabled, it will be mandatory to get the Supervisory Signature for all the assessments listed in the 'Previous Assessment of Comparison' dropdown, which is available in the Transferred to an inpatient facility, Transferred to an inpatient facility—Patient discharged and Discharge assessment in the VBP Tab. For all the assessments listed here, the Supervisory Signature and Date are to be filled by the user under the Staff Confirmation and Signature section in the VBP tab to lock the discharge OASIS Assessment. If any of the required assessments don't have a supervisory signature, the system will block the locking of the discharge assessment.

VBP - Supervisor Signature under Staff Confirmation and Signature section

VBP - Previous Assessment of Comparison

Validation shown while locking assessment

When this setting is disabled, the user can lock the OASIS Assessments without filling in the Supervisory Signature.
